

DBEdit

DBEdit 2

Original author(s)	Jef Van Den Ouweland
Developer(s)	Jef Van Den Ouweland
Initial release	January 13, 2006
Latest release	2.4.6 / May 10, 2012
Written in	Java
Operating system	Windows, Linux, Solaris
Platform	Java
Type	Relational database administration
License	GNU General Public License
Website	dbedit2.sourceforge.net ^[1]

DBEdit 2 is a database editor, which can connect to an Oracle, DB2, MySQL and any database that provides a JDBC driver. It runs on Windows, Linux and Solaris.

Open source

DBEdit is free and open source software and distributed under the GNU General Public License. The source code is hosted on SourceForge.

History

DBEdit is developed by Jef Van Den Ouweland. The first Windows version was released in January 2006 and was used to edit an Oracle or DB2 database. It is written in Java. Later on, generic JDBC support was added so that the application could connect to basically any type of database that provides a JDBC driver. One year after the first release, support for other operating systems, such as Linux and Solaris, was added.
